

GMEXICO HAS BEEN INCLUDED IN THE NEW SUSTAINABILITY INDEX

Mexico City, December 9, 2011 Grupo México SAB de CV and Subsidiaries (BMV: GMexico), whose principal business is mining, being one of the world's largest copper producers; which operates the most extensive railroad service in Mexico, and also engages in engineering services, procurement, and construction, announces that GMexico has been included in the new "IPC Sustainability Index" launched by the Mexican stock exchange (BMV) on December 8, 2011.

The 70 most liquid shares on the Mexican Stock Exchange were analyzed to develop the "IPC Sustainability Index", meeting the criteria for evaluation based on corporate governance, environmental issues, and social responsibility. Two research providers conducted the evaluation, the British firm EIRIS (Empowering Responsible Investment) and Universidad Anáhuac del Sur in Mexico. The companies included in the Index were compared using the average rating EIRIS publishes evaluating over 3,000 companies worldwide.

GMexico is proud to be included in the BMV's first sustainability index, evidencing our commitment to social responsibility, environmental sustainability and corporate governance, which will continue to be a priority for GMéxico.

GMexico has been producing its Sustainability Report since 2006 and these reports may all be found under the "Sustainable Development" menu on the Grupo México website www.gmexico.com
